No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Myers R.W., Liberator P.A., Allocco J.J., Anderson J.W., Sardana M.K., Wood T.L., Griffin P.R., Fujloka H., Schmatz D.M.;
"14-3-3 protein regulation of protozoan mannitol metabolism via inhibition of mannitol-1-phosphate dehydrogenase.",
Submitted (MAR-1998) to the EMBL/GenBank/DDBJ databases.
-: SIMILARITY: Belongs to the 14-3-3 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

-!- FUNCTION: CLEAVES LINEAR AND BRANCHED MULTIUBIQUITIN POLYMERS
WITH A MARKED PREFERENCE FOR BRANCHED POLYMERS (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: Ubiquitin C-terminal thiolester + H(2)0 -
-!- COFACTOR: ZINC.
-!- SIMILARITY: Belongs to peptidase family C19.
-!- SIMILARITY: Contains 2 UBA domains.

BLOCHEM. Physiol. 118B:659-665(1997).

-I- FUNCTION: SINGLE STRANDED DNA-BINDING PROTEIN, WITH SPECIFICITY TO THE STEROL REGULATORY ELEMENT (SRE). CNBP IS INVOLVED IN STEROL-MEDIATED REPRESSION (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: CYTOPLASMIC, ALSO PRESENT IN ENDOPLASMIC RETICULUM (BY SIMILARITY).

-I- SIMILARITY: TO S.POMBE BYR3 AND TO RETROVIRAL NUCLEIC ACID BINDING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Zinc-finger; DNA-binding; Transcription regulation; Repressor; Repeat.

"Cloning and characterization of rat cellular nucleic acid binding protein (GNBP) cDNA.";
"Cloning and characterization of rat cellular nucleic acid binding protein (GNBP) cDNA.";
-1- FUNCTION: SINGLE STRANDED DNA-BINDING PROTEIN, WITH SPECIFICITY TO THE STERCL REGULATORY ELEMENT (SRE). CNBP IS INVOLVED IN STEROL-MEDIATED REPRESSION.
-1- SUBCELLULAR LOCATION: CYTOPLASMIC, ALSO PRESENT IN ENDOPLASMIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RETICULUM (BY SIMILARITY).
--- TISSUE SPECIFICITY: PRESENT IN ALL TISSUES EXAMINED.
--- SIMILARITY: TO S.POMBE BYR3 AND TO RETROVIRAL NUCLEIC ACID BINDING

NK-2 class homeobox genes and pharyngeal/oral patterning: Nkx2-3 is required for salivary gland and tooth morphogenesis.";
Int. J. Dev. Biol. 46:415-422(2002).
I FUNCTION: Transcriptional regulator essential for normal development and functions of the small intestine and spleen. Activates directly MADCAMI expression. Required for homing of lymphocytes in spleen and mucosa-associated lymphoid tissue. May have a role during pharyngeal organogenesis.
I SUBCELLULAR LOCATION: Nuclear (Probable).
I SUBCELCITY: Expressed in spleen and intestine. Also expressed in salivary gland and tongue, which are derivate of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OGAAAGSACTOGTLO -> TATGTRPPQPLQPPQPQOGGLQ

DEVELOPMENTAL STAGE: Expressed in gut mesenchyme during pre- and postnatal development. Expressed as well in the pharyngeal floor and pouches, and in the oral and brancial arch ectoderm. Expression persisted in the developing thyroid until birth, in mucous forming cells of salivary glands and in odontogenic epithelium of the mandibule.

SIMILARITY: BELONGS TO THE NK-2 HOMEOBOX FAMILY.

structure of rat biliverdin reductase (ABB99870). Rat BVR is structurally similar to human BVR (ABB99871) and Synechocystis sp. PCC 6803 BVR (ABB99872). BVR (EC 1.3.1.24) catalyses the conversion of biliverdin to bilirubin, using NADH or NADPH as an electron donor. The BVR crystal structure, and peptide fragments of rat BVR containing residues 44-46, 96-98, 171, 218, 224 or 226 may be used for the virtual screening and design of drugs which target BVR. The present sequence represents rat BVR, which was recombinantly expressed in Escherichia coli BL21, crystallised in 0.2M sodium potassium tartrate with 2.0M of ammonium crystallography.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                   Steric structure of biliverdin reductase (BVR) used for screening of drugs, drug design and peptide fragment defined by particular amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rat; biliverdin reductase; BVR; bilirubin; protein co-ordinate data; three dimensional structure; 3D structure; X-ray crystallography; virtual drug screening; rational drug design; drug discovery; recombinant expression; Escherichia coli; EC 1.3.1.24; enzyme; mutant; mutein.
                                                                                                                                                                                                                                                                     The invention relates to the elucidation of the three dimensional

The invention relates to the elucidation of the three dimensional structure of rat biliverdin reductase (ABB99870). Rat BWR is structurally similar to human BVR (ABB99871) and Synechocystis Sp. PCC 6803 BVR (ABB99872). BWR (EC 1.3.1.24) catalyses the conversion of biliverdin to bilirubin, using NADH or NADPH as an electron donor. The BWR crystal structure, and peptide fragments of rat BWR containing residues 44.46, 96-98, 171, 218, 224 or 226 may be used for the virtual screening and design of drugs which target BWR. Sequences ABG99873-ABG99873 represent mutants of rat BWR referred to in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The present sequence is not given in the specification, but has been derived from the sequence shown in Figure 4 and the information

The invention relates to the elucidation of the three dimensional structure of rat biliverdin reductase (ABB99870). Rat BVR is structurally similar to human BVR (ABB99871) and Synchocystis sp. PCC 6803 BVR (ABB99872). BVR (EC 1.3.1.24) catalyses the conversion of biliverdin to bilirubin, using NADH or NADPH as an electron donor. The BVR crystal structure, and peptide fragments of rat BVR containing residues 44-46, 96-98, 171, 218, 224 or 226 may be used for the virtual screening and design of drugs which target BVR. Sequences AB099873-AB099878 are present mutants of rat BVR referred to in the exemplification of the The present sequence represents a rat BVR mutant in which the Cys at position 73 is replaced by Ala. Synechocystis sp. PCC 6803 BVR (ABB99872) also has an Ala at the equivalent position.

NOCE: The present sequence is not given in the specification, but has been derived from the sequence shown in Figure 4 and the information
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Steric structure of biliverdin reductase (BVR) used for screening of drugs, drug design and peptide fragment defined by particular amino acid sequences

The invention relates to the elucidation of the three dimensional structure of rat biliverdin reductase (ABB99870). Rat BVR is structurally similar to human BVR (ABB99871) and Synechocystis sp. PCC 6803 BVR (ABB99872). BVR (EC 1.3.1.24) catalyses the conversion of biliverdin to bilirubin, using NADH or NADPH as an electron donor. The BVR crystal structure, and peptide fragments of rat BVR containing residues 44.46, 96-98, 171, 218, 224 or 226 may be used for the virtual screening and design of drugs which target BVR. Sequences ABD99873-ABD999873 represent mutants of rat BVR referred to in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: The present sequence is not given in the specification, but has been derived from the sequence shown in Figure 4 and the information given on page 65.
                                                                                                                                                                                                                                                                                                                                                                                       Steric structure of biliverdin reductase (BVR) used for screening of drugs, drug design and peptide fragment defined by particular amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rat, biliverdin reductase, BVR, bilirubin; protein co-ordinate data; three dimensional structure; 3D structure; X-ray crystallography; virtual drug screening; rational drug design; drug discovery; recombinant expression; Escherichia coli; EC 1.3.1.24; enzyme; mutant; mutein.

The invention relates to the elucidation of the three dimensional structure of rat biliverdin reductase (ABB9987). Rat BVR is structurally similar to human BVR (ABB9987) and Synechocystis sp. PCC 6803 BVR (ABB99872). BVR (EC 1.3.1.24) catalyses the conversion of biliverdin to bilirubin, using NADH or NADPH as an electron donor. The BVR crystal structure, and peptide fragments of rat BVR containing residues 44.46, 96-98, 171, 218, 224 or 226 may be used for the virtual screening and design of drugs which target BVR. Sequences ABG99873-ABG99873.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The present sequence is not given in the specification, but has been derived from the sequence shown in Figure 4 and the information given on page 65.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Steric structure of biliverdin reductase (BVR) used for screening of drugs, drug design and peptide fragment defined by particular amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The invention relates to the elucidation of the three dimensional structure of rat biliverdin reductase (ABB99870). Rat BWR is structurally similar to human BVR (ABB99871) and Synechocystis Sp. PCC 6803 BVR (ABB99872). BVR (EC 1.31.24) catalyses the conversion of biliverdin to bilirubin, using NADH or NADPH as an electron donor. The BVR crystal structure, and peptide fragments of rat BVR containing residues 44.46, 96-98, 171, 218, 224 or 226 may be used for the virtual screening and design of drugs which target BVR. The present sequence represents human BVR, which has a 3D structure similar to that of rat biliverdin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Steric structure of biliverdin reductase (BVR) used for screening of drugs, drug design and peptide fragment defined by particular amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Caps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .;

Cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens. The colon cancer antigens are collectively known as colon cancer antigens. The colon cancer antigens. The colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P capression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally. N may be used to produce the colon cancer associated Ps. by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence corresponds to a fragment of a rapamycin FK506 binding protein (RFKBP). RFKBP is a prolyl isomerase structurally related to FK506 which does not bind the immunosupressive cyclosporin A. RKFBP binds FK506 and rapamycin with quantitatively significant selectivity. RKFBP may be used in screening assays to detect new immunosupressants and to differentiate rapamycin-like cpds. from FK506-like cpds.
                                                                                                                                                                                                                                                                    N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Rapamycin; FK506; binding protein; RFKBP; prolyl isomerase; immunosupressant; cyclosporin A; macrolide; bovine; thymus; bRFKBP; cis-trans prolyl isomerase activity; FKBP12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      prolyl isomerase and rapamycin FK506 binding protein - useful
                                                                                                                                                                                                                                                                                                                                                                                                         .;

                                                                                                                                                                                                                                                                  This sequence encoding the bovine FKBP-13 N-terminal sequence corresponds to the N-terminal sequence of human FKBP-13. FKBP-11 may be used for identifying immunosuppressant drugs, and may be used in combination with immunosuppressant drugs for therapeutic
                                                                                                                                                                                                                                                                                                                                   purposes in the treatment of autoimmune diseases e.g. rheumatoid arthritis and type-I diabetes, organ transplant and graft versus host disease. The recombinant form of the protein could be potentially smaller and therefore easier to introduce into cells than intact FKBP-13.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cancer antigen; diagnosis; detection;
